

Internet & Data

Great value high speed and consistently reliable business broadband with a range of packages designed to give your business the flexibility to grow. Whether you are a sole trader, a small to medium business or a large organisation, we have a broadband solution to suit you.

Cyprium are a 'multi-network provider', so can deliver a solution that is based on our customers' needs, rather than the limitations of a single network offering. So, no matter what size your business is or what industry it deals in, we have a data package to suit you, whether it is leased lines or fibre connectivity

If you decide later on that your business has grown to the point where you need more from us, Cyprium has the flexibility to provide you with an upgrade quickly, easily and without any disruption to your service.

Cyprium can provide you with a range of data solutions to suit your communication needs:

- **Business Broadband** – We offer a wide choice of fast secure and reliable business broadband packages from various network suppliers. If you're a homemaker or running a small business with up to 10 employees, we recommend our excellent value basic Broadband solution, and for businesses who need a little more from their Internet connection we have a range of higher usage and unlimited packages.
- **FTTC (Fibre Broadband)** – Enables small to medium size businesses to take advantage of high speed, high usage availability with guaranteed broadband connection. The Fibre connection enables businesses take advantage of more flexible and advanced communications options like Hosted IP telephony, Cloud Computing and utilise data hungry applications like video and web conferencing. With speeds up to 76Mb download and 19Mb upload we will make sure that your business never gets left behind
- **EFM (Ethernet First Mile)** – For businesses that require a dedicated, always-on fixed-bandwidth connectivity. A cost-effective option, EFM is perfect if you regularly exchange large volumes of data between sites. EFM is a technology for delivering a high speed, reliable internet connection to your business. Unlike a traditional Leased Line which uses Fibre to connect you to your local exchange, EFM uses bundles of copper pairs which means lower costs, high resilience with a faster installation time. Speeds are also symmetrical, so unlike a broadband connection you get the same speeds uploading data as you do downloading.

• **Leased Lines** – Leased lines offer a dedicated and unrestricted internet connection permanently available for use with various applications for your exclusive use. All of our services are fully managed by us (so there's no additional technical or administrative burden for you), symmetric (same high speed in both directions) and uncontended (no one else shares your bandwidth). What's more the internet Leased Line service includes hardware, a 24/7 helpline and a choice of speeds from 2MB – 1GB ensuring superfast, always-on access for your business-critical systems and applications.

• **SIP Channels** - SIP Trunks allow businesses to retain the advantages of their existing telecoms equipment, whilst gaining the additional functionality and benefits of IP telephony. We offer bundled Local, National and UK Mobile calls as part of your line rental, this offers you a fixed low monthly cost that will never change

Advantages

- The perfect package for your business – let us help you choose the 'best-fit' data solution for your business from our extensive portfolio
- The need for speed – with up to 76Mb download speeds and 19Mb upload speeds, we will make sure that your business never gets left behind
- No more competing – our uncongested network means that you no longer have to worry about other users slowing you down
- No downtime – our fully-redundant network means that should there be a fault, your connection will be re-routed via a different exchange to keep your business online

Tariffs

Cyprium have relationships with several of the UK's biggest Internet Service Providers (ISPs). This means we are in a great position to offer high quality business broadband at very competitive prices.

Government broadband / ethernet grants are now available using the Super Connected City and Connection Vouchers Schemes. These vouchers can cover install and connection costs up to £3000.

Cyprium are also able to offer even further discounts for customers based in Lancashire, Cheshire, Leeds, Bradford, Nottingham and across Yorkshire, and the Midlands.

Switching Providers

Cyprium can transfer the majority of broadband services away from all other leading telecoms providers, coupled with cheaper rates.

If you want a telecommunications provider that understands the needs of your business and will save you money, buy from Cyprium with confidence. Speak to one of our advisers who can help identify the solution that's perfect for your business requirements today and into the future.

We offer regular reviews and also offer "Never Beaten on Price Guarantee" which gives you peace of mind knowing that at the end of the contract we will match any lower offer or release you from your contract FOC.

Communications Audit

We can check you are on the correct tariffs & products for your business. This free service makes sure you have the peace of mind that you are not neglecting your communications or paying too much with your current provider.

- We will highlight any opportunities for you to make savings
- Combining your services into a single provider can help lower your costs and reduce admin
- Cyprium will make certain that you are receiving the best prices and quality for your communications
